

Thomas Savery
AD 1650 – AD 1715

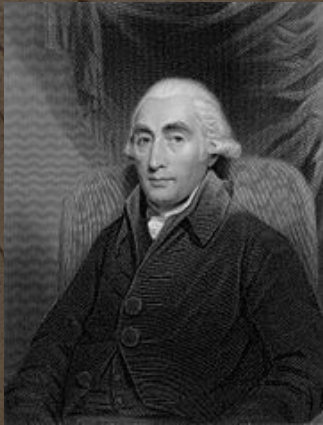

English inventor and engineer who first used steam power to drive a water pump.

Thomas Newcomen
AD 1664 – AD 1729

English ironmonger who created a steam-powered engine to pump water from flooded tin mines in Devonshire.

Joseph Black
AD 1728 – AD 1799

Scottish physicist and chemist who formulated the concepts of latent heat, specific heat, and isolated carbon dioxide.

James Watt
AD 1736 – AD 1819

Scottish inventor who improved the Newcomen Steam Engine, creating a source of more efficient power. His inventions led to the industrial revolution.
